

HOME FIRE SPRINKLERS

LIVING WITH SPRINKLERS IS EASY

Home fire sprinklers protect you, your pets & your property.

Home fire sprinklers are part of a complete system of home fire safety. Fire sprinklers require almost no maintenance and only work when you need them.

Water supply

Sprinklers connect to your home's water supply. In some homes, a tank and pump are used. Piping behind walls and ceilings connects the sprinklers to the water. The sprinklers are ready if a fire starts.

Two types of home fire sprinklers

Standalone is piping specifically for

the sprinklers. Multi-purpose means there is a combination system for regular plus the fire sprinklers.

Sprinklers work automatically

Each sprinkler works on its own. If a fire starts, its high heat in the area below the sprinkler causes the plug to open. That lets water flow on the flames. Just one sprinkler can control a home fire.
